SOFTWARE LEVEL II:	CHARLIE BARTLETT
HARDWARE :	EDWIN PAAY

MICRO-80 is an international magazine devoted entirely to the Tandy TRS-80 microcomputer and the Dick Smith System 80/Video Genie. It is available at the following prices:

	12 MONTH SUB.	SINGLE COPY
MAGAZINE ONLY	$ 26-00	$ 2-50
CASSETTE PLUS MAGAZINE	$ 65-00	$ 4-00 (cass. only)
DISK PLUS MAGAZINE	$ 125-00	$ 10-00 (disk only)

MICRO-80 is available in the United Kingdom from:
U.K. SUBSCRIPTION DEPT. 24 Woodhill Park, Pembury, Tunbridge Wells, KENT. TN2 4NW

Prices:	MAGAZINE ONLY	£ 16-00	£ 1-50
	CASSETTE PLUS MAGAZINE	£ 43-60	N|A
	DISK PLUS MAGAZINE	£ 75-00	N|A

MICRO-80 is available in New Zealand from:
MICRO PROCESSOR SERVICES, 940A Columbo Street, CHRISTCHURCH 1 N.Z. Ph. 62894

Prices:	MAGAZINE ONLY	NZ$ 43-00	NZ$ 4-00
	CASSETTE PLUS MAGAZINE	NZ$ 89-00	NZ$ 5-00
	DISK PLUS MAGAZINE	NZ$ 175-00	NZ$ 15-00

MICRO-80 is despatched from Australia by airmail to other countries at the following rates:

(12 MONTH SUB.)	MAGAZINE	CASS + MAG	DISK + MAG
PAPUA NEW GUINEA	Aus$ 40-00	Aus$ 83-00	Aus$ 143-00
HONG KONG/SINGAPORE	Aus$ 44-00	Aus$ 88-00	Aus$ 148-00
INDIA/JAPAN	Aus$ 49-00	Aus$ 95-00	Aus$ 155-00
USA/MIDDLE EAST/CANADA	Aus$ 55-00	Aus$ 102-00	Aus$ 162-00

Special bulk purchase rates are also available to computer shops etc. Please use the form in this issue to order your copy or subscription.

The purpose of MICRO-80 is to publish software and other information to help you get the most from your TRS-80, System 80 or Video Genie and their peripherals. MICRO-80 is in no way connected with either the Tandy or Dick Smith organisations.

** WE WILL PAY YOU TO PUBLISH YOUR PROGRAMS **
Most of the information we publish is provided by our readers, to whom we pay royalties. An application form containing full details of how you can use your TRS-80 or System 80 to earn some extra income is included in every issue.

** CONTENT **
Each month we publish at least one applications program in Level I BASIC, one in Level II BASIC and one in DISK BASIC (or disk compatible Level II). We also publish Utility programs in Level II BASIC and Machine Language. At least every second issue has an article on hardware modifications or a constructional article for a useful peripheral. In addition, we run articles on programming techniques both in Assembly Language and BASIC and we print letters to the Editor and new product reviews.

** LIABILITY **
The programs and other articles in MICRO-80 are published in good faith and we do our utmost to ensure that they function as described. However, no liability can be accepted for the failure of any program or other article to function satisfactorily or for any consequential damages arising from their use for any purpose whatsoever.

***** EDITORIAL *****

This issue heralds the commencement of MICRO-80's third year of publication. In the past two years we have changed a lot and so have our readers and their interests. Two years ago, the TRS-80 was still fairly new in Australia and the System 80/Video Genie had been well heralded but had failed to materialise. The majority of TRS-80 owners used L2/16K cassette-based systems with a sizeable minority using L1/4K systems. Disk-based systems were a comparative rarity. In the U.K. the TRS-80 was far behind the Commodore PET in popularity and there were probably not many more owners of TRS-80's in the whole of the U.K. than in Australia.

Now, two years later, we find a very different story. In Australia, owners of Level 1/4K TRS-80's are in a small minority, L2/16K cassette-based systems are probably still in the majority but a very large proportion of readers now use systems having one or more disk drives. The System 80/Video Genie has arrived and many thousands have been bought by enthusiastic newcomers to microcomputing. The Model III TRS-80 is growing in popularity although its owners still represent a fairly small minority of TRS-80 users. In the U.K., the Video Genie has proven very popular indeed and may have exceeded the TRS-80 in sales. The Model III TRS-80 too, is reportedly proving very popular.

The effect of all this on MICRO-80 is that those readers who have been with us for two years now have a great deal of experience and expertise and are looking for more advanced articles and programs, particularly for disk systems. Those new readers who have only just acquired their systems are looking to us to support them with elementary articles, hints and tips etc. Some System 80/Video Genie owners feel that we treat them as second class citizens; some Model III owners feel that we completely ignore them. Everyone is unhappy about our late production of the magazine. So, what are we going to do to meet the challenges of the next 12 months and make sure that we satisfy the needs of all our readers? The answer is, a great deal. Over the next few months we will be introducing a number of different departments into MICRO-80 to cater for the different interests of our readers. There will be a department devoted to disk users and another devoted to the Model III. We do not intend to differentiate between the TRS-80 Model I and the System 80/Video Genie, however, because despite minor differences, these are essentially the same system. Later in the year, we will be adding a Colour Computer Department which will cater for the recently released TRS-80 Colour Computer and the Hitachi Peach, both of which use the 6809 microprocessor and MICROSOFT BASIC interpreter. As an earnest of our intentions, we have put a considerable amount of effort into developing the new software library to be sent free to every new subscriber and every reader who renews his subscription (from this issue on). The programs in this library run on the TRS-80 Models I and III, the System 80/Video Genie and disk systems as well as cassette systems. Some of the utilities in this library are not available for the Model III for instance, at any price.

ENCHANCEMENTS TO THE MODEL II.

Recently, an enhanced version of the TRS-80 Model II microcomputer was announced in the U.S.A. Known as the Model 16, this machine incorporates a 16 bit CPU board using the Motorola 68000 chip , in addition to the standard Z80A CPU of the Model II. For just under $6000 US. Americans will be able to purchase the model 16 with 128K of RAM expandable at additional cost up to 516K. A 10 megabyte hard disk has also been announced for this machine and it is possible to connect two dumb terminals to it. Existing owners of Model II machines will be able to purchase an upgrade kit consisting of the 68000 CPU board which plugs directly into one of the vacant sockets inside the cabinet.

Based on our own experiences with the Model II, we are becoming more and more convinced that this is one of the most underrated business machines available today. We know of several salesmen working for specialist word processing organisations who privately admit that the Model II with Scripsit is superior to their own machines at about half the price! The Model 16 is sure to be an even more formidable contender than the Model II. Anyone who is considering spending $6000 - $12000 on a business computer could do much worse than purchase a Model II.

RUMOUR-SQUASHING DEPARTMENT.

For some time now, there have been persistent rumours that Tandy has dropped the expansion interface for the Model I from the Australian market. We checked this out with Mal Williams - Computer Marketing Manager at Tandy. Mal was adamant that this is not so. Indeed, at the time we called him, he was in the process of ordering more from the U.S.A. What has been dropped is the L1/4K TRS-80 Model I.

LOWER-CASE IN NEW TRS-80 MODEL I.

The TRS-80 Model I has recently undergone a minor redesign. The main reason was that the 21L02A IC's used as video RAM have become obsolete and are no longer manufactured. Instead, they have been replaced with two 2114 IC's. The significance of this is that the 2114 is arranged as 1K by 4 bits so the two chips give a video RAM of 1K by 8 bits whereas previously, the machine had only 1K by 7 bits as standard. An important part of any lower-case modification was the addition of an extra 21L02A video RAM chip to increase the video RAM to 1K by 8 bits. This modification is no longer necessary to obtain lower-case. A further rationalization carried out has been to drop the earlier character generator and use only the more recent one which contains proper lower-case characters. If you have one of these recent machines, all you need do to obtain correct lower-case characters in BASIC, is to load a machine language lower-case driver routine such as that published on page 29, Issue 18 of MICRO-80. A word processor program such as SCRIPSIT will automatically enable the lower-case.

CONTINUED ON PAGE 8

***** REVIEW OF THE TRS-80 COLOUR COMPUTER *****

The major part of this review was written by Rob Glanville of Victoria who imported his own Colour Computer from the U.S.A. some time ago. Rob previously used a TRS-80 Model I and is an avid games enthusiast. Before handing over to Rob, we will record our own impressions of the Colour Computer and, more importantly, its position relative to other computers which are available.

The TRS-80 Colour Computer is a TRS-80 in name and livery only. In all other respects it is completely different from the other computers which share the name TRS-80. No attempt has been made to provide compatibility or program interchange with the Model I or Model III. Why has Tandy taken this approach?

Tandy did not tell us (to be fair, we didn't ask the question in those terms) but it is not too difficult to work out. There has been a lot of requests for high resolution colour graphics from Model I and III owners but the hardware and memory mapping of this machine preclude a simple, economical solution to the problem. Equally, many people have been buying video games machines which have become more and more intelligent, culminating in the Atari 400 and 800 microcomputers. Tandy has obviously seen an opportunity to enter a new market - the super-intelligent video games machine. Model I and Model III owners will have to make a choice. Do they want to stay with their more powerful (in computing terms) more expandable systems and put up with low resolution monochrome graphics, or would they prefer the high resolution colour graphics display of the Colour Computer, knowing that it will never be capable of all the serious uses to which the Model I/Model III can be put.

The latter is an important point. In our opinion, the Colour Computer will never be seriously used as a word processor for example, or for any application requiring the input of large amounts of data. The keyboard is too much like a calculator for the former and there is no numeric keypad available or projected. Add to that a display of 16 lines of only 32 characters each and lower-case indicated by upper-case letters with colours reversed, and you will understand why we say what we do. Nor does Tandy suggest that the Colour Computer should be used in business-type applications. They have the Models II and III for that.

So, the choice is yours, if you want a true home computer which will be lots of fun for the family (it has to be because whilst you are using it the colour T.V. is tied up!) using packaged software, but which will allow you to write your own programs and learn programming in BASIC, then the Colour Computer could be just right for you. On the other hand, if you are the type who frowns on the use of computers for playing games (and many do) or who would like to use your computer as a word processor or for stock control, etc. etc., then you would be better off opting for a Model II or III as far as the Tandy range is concerned.

Now, over to Rob for some more details of the Colour Computer.

The keyboard unit of the TRS-80 Colour Computer measures 375mm long x 350mm deep. The keys are of a plastic calculator type coloured grey, control keys are white and break key is red. The keyboard unit is coloured 'Tandy' silver. The computer is quite light, apparently 80% less IC's are used, compared with the Model I. At the right side of the unit is the cartridge slot for use with Tandy's 'Program Paks'. The back of the computer has reset button, AC cord, channel selector, video output (RF Modulated), cassette jack, RS232 serial Interface, 2 joystick jacks and power switch.

The basic Colour Computer comes with one (1) programming manual, but if Extended Basic is installed, two (2) manuals are included. Both manuals are lighthearted, entertaining and most importantly teach you about this quite different TRS-80. Plenty of do-it-yourself type exercises and sample programs are provided to show this machine's capabilities.

On power up the screen clears to the default colour of green and message below appears:

EXTENDED COLOR BASIC 1.0

COPYRIGHT (C) 1980 BY TANDY

UNDER LICENSE FROM MICROSOFT

OK

The cursor is constantly cycling through the nine (9) colours, which are black, green, yellow, blue, red, buff, cyan, magenta and orange. The unit powers up in 'caps lock' position. Type shift Ø and typewriter style operation is obtained. Lower case letters are displayed as inverse capitals, i.e. green letters on black background. The display is 32 characters per row x 16 columns. This makes text easy to read.

The standard unit has 8K of Read Only Memory (ROM) which is quite useful, but Extended Color Basic, which is an additional 8K ROM circuit, makes this computer much more flexible and easy to use with Simple Basic statements. Standard Color Basic has 'set' graphics of 64 x 32 resolution.

Higher resolution graphics are obtainable, but could prove confusing to the first time user.

Graphics Extended Basic Only:

There are several PMODEs (degrees of resolution) to choose from. These are:

PMODE 0	128 x 96	Two Colours	1 page
1	128 x 96	Four Colours	2 pages
2	128 x 192	Two Colours	2 pages
3	128 x 192	Four Colours	4 pages
4	256 x 192	Two Colours	4 pages

Colour sets available are:

PMODE#	SCREEN	TWO COLOUR	FOUR COLOUR
4	0	Black/Green	-
	1	Black/buff	-
3	0		Green, Yellow, Blue, Red Buff, Cyan, Magenta, Orange.
2	0	Black/Green	
	1	Black/Buff	
1	0		Green, Yellow, Blue Red.
	1		Buff, Cyan, Magenta, Orange.
0	0	Black/Green	
	1	Black/Buff	

RAM for graphics is allocated by the PCLEAR N statement. N is number of pages to be cleared. Each page is 1536 bytes. All graphics are plotted on a 256 x 192 pixel matric. Example:-

```
10  PCLEAR  4 : ' Clear 4 pages of RAM.
20  PCLS      : ' Clear graphic pages to background colour.
30  PMODE 3,1 : ' Select resolution required.
40  SCREEN 1,0: ' 1 Selects graphic screen, 0 selects colour set.
50  PSET (128,96,2) : ' Sets 1 pixel at centre of the screen, yellow in colour.
60  GOTO 60   : ' Loop forever.
```

The command PRESET turns off pixels which were previouslyu PSET.

LINE : Draws a line from (X1, Y1) - (X2, Y2), PSET.

Example:-

Line (Ø,Ø) - (225,191), PSET would draw a line from top left corner of screen to bottom right corner. This statement could also include 'B' to draw a box and/or 'F' to fill the box with colour.

CIRCLE : Syntax is (X, Y),r, c, hw, start, end.

X,Y is co-ordinate for centre of circle.

r specifies radius of circle.

c Specifies colour (dependent on colour set chosen).

hw Specifies height/width ratio - numeric from 1 to 255.

Start Specifies start point of circle, 0 - 1.

End Specifies end point of circle, 0 - 1.

DRAW : "String".

Motion Commands:

M Move draw position.

U Up.

D Down.

L Left.

R Right.

E 45^{O} Angle.

F 135^{O} Angle.

G 225^{O} Angle.

DRAW : "String" continued..

Motion Commands:

H 315° Angle.

X Execute a substring and return.

Modes:

C Colour.

A Angle.

S Scale.

Options:

N No update of draw position.

B Blank. Used to prefix Move, also for blank lines.

Example:

```
DRAW "BMØ,Ø; R255;D191;L255;U191".
```

This would DRAW a line starting at top left corner, continuing around screen border.

NOTE - Since text characters cannot be shown on the graphics screen, the DRAW command can be used to DRAW the text.

Substrings can be executed as follows:

```
10    PMODE 3,1
20    PCLS
30    PCLS
40    A$ = "BM128,96;U25;R25;D25;L25".
50    DRAW "BM95,50;U25;XA$;D25;L25".
60    GOTO 60.
```

All substrings must be prefixed with X. The semi colon after the xy start point is compulsory, while semi colons separating movement commands are optional, but usually included for legibility.

GET/PUT:

This is the fastest way to move things around on the graphics screen. It works like this:

1st. Define area required as an array (maximum 1,400 elements).
2nd. DRAW (or otherwise) your shape to be moved.
3rd. GET (label) the area of memory (screen location).
4th. Clear graphics screen or draw blanks.
5th. Put the array back on the screen in destination stated.

EXAMPLE:

```
10    PCLEAR 4
20    PMODE 3,1
30    PCLS
40    SCREEN 1, 1
50    DIM V (20, 20): Dimension array for use.
60    CIRCLE(20, 20), 10
70    GET (10, 10) - (30, 30), V:' Label array with area of screen.
80    PCLS
90    FOR PAUSE = 1 to 300 : NEXT PAUSE.
100   PUT (110, 110) - (130, 130), V:' PUT circle elsewhere.
110   FOR PAUSE = 1 to 300 : NEXT PAUSE.
120   GOTO 120 :' loop forever.
```

This program DRAWs a circle at position 10, 10 then clears the screen and PUTs the circle back at position 110, 110.

PLAY:

Forget machine language subroutines and POKEing sounds, durations etc. Now you can PLAY all sorts of notes and sounds. PLAY notes from A-G over 5 octaves including flats and sharps. Length of notes can vary from 1 which is a whole note up to 1/255th of a note. Tempo can be set from 1 up to 255. Volume is software selectable with 30 levels. Rests are available with durations same as length of notes. Substrings can be executed as in DRAW.

Back to more mundane commands. RENUM is functionally the same as the utility program available

CONTINUED ON PAGE 8

***** INDEX ..... DECEMBER 1980 TO NOVEMBER 1981 INCLUSIVE *****

CONTINUED FROM PAGE 5

for the Model I. INSTR allows the user to search a string for a specified target section. DEFUSR is included as is HEX$. Many Level III commands are implemented in Extended Color Basic.

Joysticks are 'read' by the JOYSTIK command. Another way is to EXECute HEX AØØA and PEEK the values stored in (left joystick) Up/Down 15A, Right/Left 15B, (right joystick) Up/Down 15C, Right/Left 15D.

The processor used in the Colour Computer is a Motorola MC 6809 E running at slightly less than .9Mhz. To increase the processor speed try POKE 65495,Ø. The cursor will immediately start flashing more quickly. Do not use cassette I/O, SOUND or PLAY commands. These sound generation commands will not sound the way you planned. The MC6809 E processor is one of the most powerful 8 bit micro-processors available with several 16 bit operations. For very complete and thorough discussion regarding the construction, hardware design I suggest you read "BYTE' March 1981 issue. This article also shows requirements for building your own ROM paks.

Cassette operation on the Colour Computer is different to the Model I in that OPEN and CLOSE are used for data files. Transfer of cassette information is at a fast and reliable 1500 baud.

Available Software:

Radio Shack have several cartridges available. All these are aimed squarely at the home user, and are quite 'idiot proofed' for this purpose.

Cartridges I have and can recommend from experience are :-

1. Diagnostic Pak - this is fine for testing your new and shiny Colour Computer, but apart from that...

2. Pinball - has a built in playing field which is not very exciting. BUT you can create your own design using the joysticks and save your masterpiece onto cassette tape for future reloading. Tilt function and extra ball are included in this well-designed package.

3. Quaser Commander - is a space 'Seek and Destroy' type game with 3-dimensional aspect to the display. The enemy can be stationary or try to escape. You can put your craft on 'auto pilot', view the radar, vary your throttle setting, kill, destroy - marvellous! If you liked Instant Software's Cosmic Patrol, you will love QUASER.

4. Football - is American grid iron game for two players each controlling their own team. Offensive and defensive plays are included. The animation is very good with men running all over the screen.

5. Dino Wars - is a two player game. Each player controls his/her dinosaur trying to sneak up behind his/her opponent and bite the enemy on the neck. Graphics are superb as are the sound effects. Suggest for kids 8 to 80. This game is highly recommended. Great for giving the wife a beating etc...

Several more cartridges are available and more are being released soon. Software is available from independant sources. One warning: Be careful what you buy as there is some low quality material around. I know - I have bought some real junk. But, in amongst the junk, there are some brilliant games - Asteroids, Invaders, Adventure etc. available in the U.S.A. Many utilities/ programming aids are also available - monitors, editor/assemblers etc.

Conclusion:

I heartily recommend this machine as a home computer. For games enthusiasts like myself it is exceptional. With unlimited expansion capabilities via the cartridge slot, the user can expect many products, languages etc. in the future.

PRICES:

The following is a list of prices for the TRS-80 Colour Computer in Australia:

Basic Colour Computer with 4K RAM	$599.00
Colour Computer with Extended Colour BASIC 16K RAM	$849.00
Colour Computer with Extended Colour BASIC 32K RAM	$1,029.00
Pair of joysticks	$39.95
Disk drive Ø	$699.00
Disk drives 1, 2 and 3	$499.00
ROMpaks	$39.95 - $59.95

CONTINUED FROM PAGE 2

To test whether your machine has lower-case, type in POKE 15872,97 <ENTER/NEWLINE> . A lower-case a should be printed near the centre of the screen. If it is, then you only need a lower-case driver program to obtain lower-case in BASIC. If an upper-case A is printed then you will need a hardware modification such as that available from MICRO-80.

***** A WORD FROM THE SOFTWARE EDITOR - by Charlie Bartlett *****

Due to the Christmas break, combined with a higher than normal receipt of software, the software department now has a severe backlog of software to examine. If you sent in software just before Christmas, (early December onwards) don't panic - it will be several weeks before you hear anything.

I also get enquiries from readers who have had software accepted for publication several months ago, and who are (naturally) wondering if and when their program will be published. As, at the time of writing, I have enough programs on hand for about 9 months and couple that with the need to balance the content of the magazine, you can see that programs very rarely get accepted and published in the space of a few weeks. As I said above, the content of the magazine has to be balanced. You might, for instance, send in a very, very, very good program dealing with, say, XLOTTO. (It would HAVE to be good). To take XLOTTO as an example I have three XLOTTO programs that are GOOD and deal with the subject in interesting and different ways. If I included each XLOTTO in, say, three issues, one after the other, that would be very boring, no matter how good each program is. So I space them well apart, which gives you the variety but, of course, leaves the author wondering when his program will appear. There are exceptions of course. If you send in something that is either very original, very useful or just happens to achieve the balance of content that we are looking for, for a particular issue, then you come to the top of the pile.

So if you have been sitting on the edge of your seat waiting to see your program in print - don't. Sit back and relax. It WILL appear! We haven't forgotten you and we haven't lost it.

- 0000000000 -

★ ★ SOFTWARE SECTION ★ ★

***** TRIANGLE SOLUTIONS LI/4K - by B. Smith *****

This program is designed to calculate unknown sides, angles and area of any triangle. In all cases side "S1" must be known and at least two other variables (sides or angles). Conversion from degrees, minutes and seconds to decimal degrees can be carried out on screen.

As the calculations call for numerous trigonometric functions, and as these are not inherent in level I ROM's, a call to Tandy's subroutines at line 3ØØØØ is required.

It calculates all unknowns quickly and, in some cases, two solutions whenever doubt exists if opposite angles are acute or obtuse.

This program should be handy to anyone who requires areas for concrete pours, builder for roof truss lengths or the student to check homework calculations.

Instructions start at line 25ØØ; triangle drawing at line 2Ø1Ø; input questions line 1ØØ; triangle solutions at line 35Ø and trigonometric functions at line 3ØØØØ.

***** 3D MAZE L2/16K - by S. Holloway *****

The program produces a 3-D display of the player's position in a maze, allowing him/her to turn and move. The aim is to find the exit with the fewest turns, moves and looks at the map.

Program Action

A single two-dimensional array is used for the maze cell data. Each cell can have a value of 0-15 (higher value is used to identify border). Each bit (1,2,3,8) represents a wall so Ø means no walls, 1 a West wall, 2 a North wall, 3 a North and a West wall and so on.

The maze is made by making a random route until a dead end is met. Then a new route is attached to the first and this proceeds randomly until dead end. Another route added, and so on until all cells have been used. An exit is made on the South edge and the maze is complete.

To display a correct 3-D picture of the player's position, the program rotates the cell information using a logical shift. A cell having a value of 11 has a West wall (1), a North wall (2) and a South wall (8). If the player is facing East the cell is rotated right once, i.e. 1Ø11 becomes 11Ø1 or 13 - this signifies a left wall, a right wall and a wall behind which is, of course, not displayed.

The 'help' routine prints a map of the maze and marks the player's position with a flashing 'X'. The keyboard is disabled during the map display so it cannot be held longer than a set time.

A hint for players is to remember the direction you are facing and remember the exit is only obvious when you are right next to it.

As only 8K of memory is used there is room to add extras like random hazards and even develop a full adventure-type program. In this case it would be necessary to change the route-making section as the present method produces a simple connected maze, i.e. only one route and no loops.

DON'T BE HELD BACK BY AN ANTIQUATED DISK OPERATING SYSTEM

MOVE UP TO

NEWDOS 80 **$149 incl. p&p**

NEWDOS 80 is a completely new DOS for the TRS-80 SYSTEM 80. It is well-documented, bug free and increases the power of your system many times over. It is upward compatible with TRSDOS AND NEWDOS (ie TRSDOS and NEWDOS+ programs will run on NEWDOS 80 but the reverse is not necessarily so).

These are just a few of the many new features offered by NEWDOS 80.

* New BASIC commands that support variable record lengths up to 4095 bytes long.
* Mix or match disk drives. Supports any track count from 18 to 96. Use 35, 40, 77 or 80 track 5¼ inch mini disk drives, 8 inch disk drives OR ANY COMBINATION.
* An optional security boot-up for BASIC or machine code application programs. User never sees "DOS-READY" or "READY" and is unable to "BREAK", clear screen or issue any direct BASIC statements, including "LIST".
* New editing commands that allow program lines to be deleted from one location and moved to another or to allow the duplication of a program line with the deletion of the original.
* Enhanced and improved RENUMBER that allows relocation of subroutines.
* Create powerful chain command files which will control the operation of your system.
* Device handling for routing to display and printer simultaneously.
* MINIDOS — striking the D, F and G keys simultaneously calls up a MINIDOS which allows you to perform many of the DOS commands without disturbing the resident program.
* Includes Superzap 3.0 which enables you to display/print/modify any byte in memory or on disk.
* Also includes the following utilities:
  - Disk Editor/Assembler
  - Disassembler (Z80 machine code)
  - LM offset — allows transfers of any system tape to Disk file — automatically relocated.
  - LEVEL I — Lets you convert your computer back to Level 1.
  - LVIDKSL — Saves and loads Level 1 programs to disk.
  - DIRCHECK — Tests disk directories for errors and lists them.
  - ASPOOL — An automatic spooler which routes a disk file to the printer whilst the computer continues to operate on other programs.
  - LCDVR — a lower case drives which display lower case on the screen if you have fitted a simple lower case modification.

DISK DRIVE USERS ELIMINATE CRC ERRORS AND TRACK LOCKED OUT MESSAGES FIT A PERCOM DATA SEPARATOR

$37.00 plus $1.20 p&p.

When Tandy designed the TRS-80 expansion interface, they did not include a data separator in the disk-controller circuitry, despite the I.C. manufacturer's recommendations to do so. The result is that many disk drive owners suffer a lot of Disk I/O errors. The answer is a data separator. This unit fits inside your expansion interface. It is supplied with full instructions and is a must for the serious disk user.

MPI DISK DRIVES HIGHER PERFORMANCE — LOWER PRICE

MPI is the second largest manufacturer of disk drives in the world. MPI drives use the same form of head control as 8" drives and consequently, they have the fastest track-to-track access time available — 5msec! All MPI drives are capable of single or double-density operation. Double-density operation requires the installation of a PERCOM doubler board in the expansion interface.

As well as single head drives, MPI also makes dual-head drives. A dual-head drive is almost as versatile as two single-head drives but is much cheaper.

Our MPI drives are supplied bare or in a metal cabinet — set up to operate with your TRS-80 or SYSTEM 80. All drives are sold with a 90 day warranty and service is available through MICRO-80 PRODUCTS.

MPI B51 40 Track Single Head Drive. . . . . only $349
MPI B52 40 Track Double Head Drive. . . . . only $449

Prices are for bare drives and include p&p. Add $10.00 per drive for a cabinet and $60.00 for a power supply to suit two drives. 40 track drives are entirely compatible with 35 track drives. A 40 track DOS such as NEWDOS 80 is necessary to utilise the extra 5 tracks.

OVER 800 KILOBYTES ON ONE DISKETTE! WITH MPI 80 TRACK DRIVES

MPI 80 track drives are now available. The B91 80 track single-head drive stores 204 Kilobytes of formatted data on one side of a 5¼ inch diskette in single-density mode. In double-density mode it stores 408 Kilobytes and loads/saves data twice as quickly.

The B92 80 track dual-head drive stores 204 Kilobytes of formatted data on EACH side of a 5¼ inch diskette in single-density mode. That's 408 Kilobytes per diskette. In double-density mode, the B92 stores a mammoth 408 Kilobytes per side or 816 Kilobytes of formatted data per diskette. With two B92's and a PERCOM double, you could have over 1.6 Megabytes of on line storage for your TRS-80 for less than $1500!!

MPI B91 80 Track Single Head Drive. . . . . only $499
MPI B92 80 Track Dual Head Drive . . . . . only $619

Prices are for bare drives and include p&p. Add $10.00 per drive for a cabinet and $60.00 for a power supply to suit two drives. Note: 80 track drives will not read diskettes written on a 35 or 40 track drive. If drives with different track counts are to be operated on the same system, NEWDOS 80 must be used.

CARE FOR YOUR DISK DRIVES? THEN USE 3M's DISK DRIVE HEAD CLEANING DISKETTES

$30.20 incl. p&p.

Disk drives are expensive and so are diskettes. As with any magnetic recording device, a disk drive works better and lasts longer if the head is cleaned regularly. In the past, the problem has been, how do you clean the head without pulling the mechanism apart and running the risk of damaging delicate parts. 3M's have come to our rescue with SCOTCH BRAND, non-abrasive, head cleaning diskettes which thoroughly clean the head in seconds. The cleaning action is less abrasive than an ordinary diskette and no residue is left behind. Each kit contains:

- 2 head cleaning diskettes
- 1 bottle of cleaning fluid
- 1 bottle dispenser cap

PLEASE USE ORDER FORM ON PAGE 36

USE TANDY PERIPHERALS ON YOUR SYSTEM-80 VIA SYSPAND-80 - $97.50 incl. p&p

The SYSTEM-80 hardware is not compatible with the TRS-80 in two important areas. The printer port is addressed differently and the expansion bus is entirely different. This means that SYSTEM-80 owners are denied the wealth of economical, high performance peripherals which have been developed for the TRS-80. Until now, that is. MICRO-80 has developed the SYSPAND-80 adaptor to overcome this problem. A completely self-contained unit in a small cabinet which matches the colour scheme of your computer, it connects to the 50-way expansion part on the rear of your SYSTEM 80 and generates the FULL Tandy 40 way bus as well as providing a Centronics parallel printer port. SYSPAND-80 enables you to run an Exatron Stringy Floppy from your SYSTEM 80, or an LNW Research expansion interface or any other desirable peripherals designed to interface to the TRS-80 expansion port. Make your SYSTEM 80 hardware compatible with the TRS-80 via SYSPAND-80.

PROGRAMS BY MICROSOFT

EDITOR ASSEMBLER PLUS (L2/16K) $37.50 + $1.20 p&p

A much improved editor-assembler and debug/monitor for L2/16K TRS-80 or SYSTEM 80. Assembles directly into memory, supports macros and conditional assembly, includes new commands-substitute, move, copy and extend.

LEVEL III BASIC $59.95 plus $1.20 p&p

Loads on top of Level II BASIC and gives advanced graphics, automatic renumbering, single stroke instructions (shift-key entries) keyboard debounce, suitable for L2/16K and up (Not Disk BASIC)

ADVENTURE ON DISK $35.95 plus $1.20 p&p

This is the original ADVENTURE game adapted for the TRS-80. The game fills an entire diskette. Endless variety and challenge as you seek to rise to the level of Grand Master. Until you gain skill, there are whole areas of the cave that you cannot enter. (Requires 32K One Disk)

BASIC COMPILER $208 plus $2.00 p&p

New improved version, the Basic Compiler converts Disk BASIC programs to machine code, automatically. A compiled program runs, on average, 3-10 times faster than the original BASIC program and is much more difficult to pirate.

UPGRADE TO 16K FOR ONLY $30.00!!

MICRO-80's 16K MEMORY EXPANSION KIT HAS BEEN REDUCED IN PRICE EVEN MORE

Larger volume means we buy better and we pass the savings on to you. These are our proven, prime, branded 200 ns (yes, 200 nanosecond) chips. You will pay much more elsewhere for slow, 350 ns. chips. Ours are guaranteed for 12 months. A pair of DIP shunts is also required to upgrade the CPU memory in the TRS-80 — these cost an additional $4.00. All kits come complete with full, step-by-step instructions which include labelled photographs. No soldering is required. You do not have to be an experienced electronic technician to instal them.

DISK DRIVE CABLES SUITABLE FOR ANY DISK DRIVES

DC-2 2 Drive Connector Cable . . . . . $39 incl. p&p
DC-4 4 Drive Connector Cable . . . . . $49 incl. p&p

DOUBLE THE SPEED AND CAPACITY OF YOUR DISK DRIVES PERCOM DOUBLER ONLY $220 plus $2.00 p&p

Installing a Doubler is like buying another set of disk drives, only much cheaper!! The doubler works with most modern disk drives including:- MPI, Micropolis, Pertec, TEAC (as supplied by Tandy). The doubler installs in the TRS-80 expansion interface, the System-80 expansion interface and the LNW Research expansion interface in a few minutes without any soldering, cutting of tracks, etc. It comes complete with its own TRSDOS compatible double density operating system.

DOUBLE-ZAP II — DOUBLE DENSITY PATCH FOR NEWDOS 80 ONLY $53.00 plus $1.00 p&p

DISCONTINUED

If you are using NEWDOS 80, then you also need DOUBLE-ZAP II on diskette. This program upgrades your NEWDOS 80 to double density with ADR (automatic density recognition). It retains all the familiar features, including the ability to mix and match track counts on the same cable. In addition, it gives NEWDOS 80 the ability to mix densities on the same cable, automatically. If you place a single density diskette in drive Ø, say and a double density diskette in drive 1, Double-ZapII will recognise this and read/write to drive Ø in single density whilst at the same time it reads/writes to drive 1 in double density!

FLOPPY DOCTOR AND MEMORY DIAGNOSTIC (by MICRO CLINIC) $29.95 plus 50c. p&p

Two machine language programs on a diskette together with manual which thoroughly test your disk drives and memory. There are 19 possible error messages in the disk drive test and their likely causes are explained in the manual. Each pass of the memory tests checks every address in RAM 520 times, including the space normally occupied by the diagnostic program itself. When an error occurs the address, expected data, and actual data are printed out together with a detailed error analysis showing the failing bit or bits, the corresponding IC's and their location. This is the most thorough test routine available for TRS-80 disk users.

BOOKS

LEVEL II ROM REFERENCE MANUAL $24.95 + $1.20 p&p

Over 70 pages packed full of useful information and sample programs. Applies to both TRS-80 and SYSTEM 80.

TRS-80 DISK AND OTHER MYSTERIES $24.95 + $1.20 p&p

The hottest selling TRS-80 book in the U.S.A. Disk file structures revealed, DOS's compared and explained, how to recover lost files, how to rebuild crashed directories — this is a must for the serious Disk user and is a perfect companion to any of the NEWDOS's.

LEARNING LEVEL II $16.95 + $1.20 p&p

Written by Daniel Lien, the author of the TRS-80 Level I Handbook, this book teaches you, step-by-step, how to get the most from your Level II machine. Invaluable supplement to either the TRS-80 Level II Manual or the System-80 Manuals.

MORE AUSTRALIAN SOFTWARE

All programs designed to run on both the TRS-80 or the SYSTEM 80 without modification. Most programs include sound

TRIAD VOL 1 – L2/16K
Cassette $10.95 Disk $15.95
+ 60c p&p

Three separate games which test your powers of memory and concentration. The programs combine graphic displays and sound:

SIMON-SEZ: Just like the electronic music puzzles on sale for more than $20. Numbers are flashed on the screen and sounded in a sequence determined by the computer. Your task is to reproduce the sequence, correctly.

LINE?: Rather like a super, complicated version of noughts and crosses. You may play against another player or against the computer itself. But beware, the computer cheats!

SUPER CONCENTRATION: Just like the card game but with more options. You must find the hidden pairs. You may play against other people, play against the computer, play on your own, or even let the '80 play on its own.

TRIAD VOL 2 – L2/16K
Cassette $10.95 Disk $15.95
+ 60c p&p

Remember those "NUMERO" puzzles in which you had a matrix of numbers (or letters) with one blank space and you had to shuffle the numbers around one at a time until you had made a particular pattern? Well, **SHUFFLEBOARD**, the first program in this triad, is just this, except that the computer counts the number of moves you take to match the pattern it has generated – so it is not possible to cheat.

MIMIC is just like SHUFFLEBOARD except that you only see the computer's pattern for a brief span at the beginning of the game, then you must remember it!

In **MATCHEM**, you have to manoeuvre 20 pegs from the centre of the screen to their respective holes in the top or bottom rows. Your score is determined by the time taken to select a peg, the route taken from the centre of the screen to the hole and your ability to direct the peg into the hole without hitting any other peg or the boundary.

VISURAMA L2/16K
Cassette $10.95 Disk $15.95
+ 60c p&p

Two programs which give fascinating, ever-changing patterns on the screen.

LIFE is the fastest implementation of the Game of Life you will see on your '80. Machine language routines create up to 1200 new generations per minute for small patterns or up to 100 per minute for the full 128 x 48 screen matrix. Features full horizontal and vertical wraparound.

EPICYCLES will fascinate you for hours. The ever-changing ever-moving patterns give a 3D effect and were inspired by the ancient Greek theories of Ptolemy and his model of the Solar system.

EDUCATION AND FUN – L1/4K, L2/16K
Cassette $10.95 Disk $15.95
+ 60c p&p

Written by a primary school teacher to make learning enjoyable for his pupils, there are five programs in both Level I and Level II to suit all systems:

BUG-A-LUG: a mathematics game, in which you must get the sum correct before you can move.

AUSTRALIAN GEOGRAPHY: learn about Australian States and towns, etc.

SUBTRACTION GAME: build a tower with correct answers.

HOW GOOD IS YOUR MATHS? Select the function (+, –, ÷ or X) and degree of difficulty.

HANGMAN: That well known word game now on your computer.

Recommended for children from 6 to 9 years.

COSMIC FIGHTER & SPACE JUNK – L2/16K
Cassette $10.95 Disk $15.95
+ 60c p&p

Both programs have sound to complement their excellent graphics. In **COSMIC FIGHTER**, you must defend the earth against seven different types of alien aircraft. It is unlikely that you will be successful but you will have a lot of fun trying!

You mission in **SPACE JUNK** is to clean up all the debris left floating around in space by those other space games. It is not as simple as it sounds and space junk can be quite dangerous unless you are very careful.

SPACE DRIVE L2/4K & 16K
Cassette $8.95 Disk $13.95
+ 60c p&p

Try to manoeuvre your space ship through the meteor storms then land it carefully at the space port without running out of fuel or crashing. Complete with realistic graphics.

STARFIRE AND NOVA INVASION L2/16K
Cassette $10.95 Disk $15.95
+ 60c p&p

Both programs include sound to improve their realism.

STARFIRE seats you in the cockpit of an X-wing fighter as you engage in battle with the deadly Darth Vader's Tie-fighters. Beware of the evil one himself and may the Force be with you.

In **NOVA INVASION**, you must protect your home planet of Hiberna from the invading NOVADIANS. You have two fixed guns at each side of the screen and a moveable one at the bottom. Apart from shooting down as many invaders as possible, you must protect your precious hoard of Vitaminium or perish!

AIR ATTACK AND NAG RACE – L2/16K
Cassette $10.95 Disk $15.95
+ 60c p&p

An unlikely combination of programs but they share the same author who has a keen sense of humour.

AIR ATTACK includes sound and realistic graphics. The aircraft even have rotating propellors! But they also drop bombs on you, so it's kill or be killed!

NAG RACE lets you pander to your gambling instinct without actually losing real money. Up to five punters can join in the fun. Each race results in a photo-finish whilst there is a visible race commentary at the bottom of the screen throughout the race. Happy punting!

FOUR LETTER MASTERMIND L2/16K
Cassette $8.95 Disk $13.95
+ 60c p&p

There are 550 four-letter words from which the computer can make its choice. You have 12 chances to enter the correct word. After each try, the computer informs you of the number of correct letters and those in the correct position. You can peek at the list of possible words but it will cost you points. Makes learning to spell fun.

MUSIC IV – L2/16K
Cassette $8.95 Disk $13.95
+ 60c p&p

Music IV is a music compiler for your '80. It allows you to compose or reproduce music with your computer that will surprise you with its range and quality. You have control over duration (full beat to 1/16 beat) with modifications to extend the duration by half or one third for triplets. Both sharps and flats are catered for as are rests. Notes on whole sections may be repeated. The program comes with sample data for a well-known tune to illustrate how it is done.

*****SAVE 00$'s ***SAVE 00$'s ***SAVE 00$'s ***MICRO-80 EXPANSION INTERFACE *****

MICRO-80's expansion interface utilises the proven LNW Research Expansion board. It is supplied fully built up and tested in an attractive cabinet with a self contained power supply, ready to plug in and go. The expansion interface carries MICRO-80's full, no hassle, 90-day warranty.

Features include:- • Sockets for up to 32K of memory expansion • Disk controller for up to 4 disk drives • Parallel printer port • Serial RS232C/20mA I/O port • Second cassette (optional)

The expansion interface connects directly to your TRS-80 L2/16K keyboard or, via SYSPAND-80 to your SYSTEM-80VIDEO GENIE

Prices: HD-010-A Expansion Interfaces with Ø K : $499.00 HD-010-B Expansion Interfaces with 32K : $549.00 HD-011 Data separator fitted (recommended) : add $29.00 HD-012 Dual cassette Interfaces fitted : add $19.00

The MICRO-80 Expansion Interface is also available in kit form.

Prices: HD-013 Kit consisting of LNW Research PC board and manual, ALL components including cabinet & power supply : $375.00 HD-011 Data separator for above $25.00 HD-013 Dual cassette Interface kit : $15.00

TURN THIS into this

for $49.00 plus $2.00 p & p

A choice of upper and lower case display is easier to read, gives greater versatility.

The Micro-80 lower case modification gives you this facility, plus the symbols for the 4 playing-card suits for $49.00 + $2.00 p. & p.

The Micro-80 modification features true below-the-line descenders and a block cursor.

Each kit comes with comprehensive fitting instructions and two universal lower-case drive routines on cassette to enable you to display lower case in BASIC programs.

The driver routines are self-relocating, self-protecting and will co-reside with other machine language programs such as Keyboard-debounce, serial interface driver programs etc.

Both programs give your TRS-80™ Model I or System 80™ an optional typewriter capability, i.e. shift for upper case.

The second programme also includes Keyboard-debounce and a flashing cursor.

You fit it. Or we can.

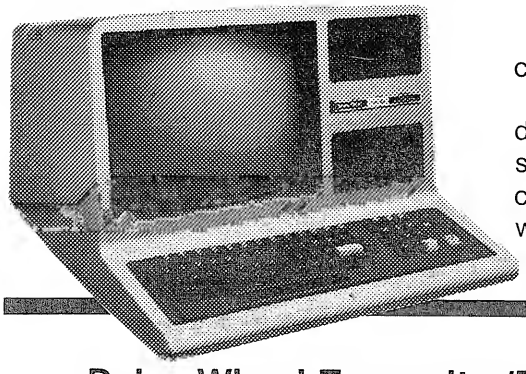
Fitting the modification requires soldering inside the computer. This should only be carried out by an experienced hobbyist or technician.

If you are at all dubious, a fitting service is available in all capital cities for only $20.00.

A list of installers is included with each kit.

Save $120 now.

ADD A DISK DRIVE TO YOUR TRS-80™ MODEL III FOR ONLY $875.00 OR ADD TWO FOR ONLY $1199.



The Micro-80 disk drive upgrade for the TRS-80™ Model III contains the following high quality components:

1 or 2 MPI 40-track single head disk drives, 1 VR Data double-density disk controller board and 1 dual drive power supply plus all the necessary mounting hardware, cables and comprehensive fitting instructions, which can be carried out with a minimum of fuss by any average computer owner.

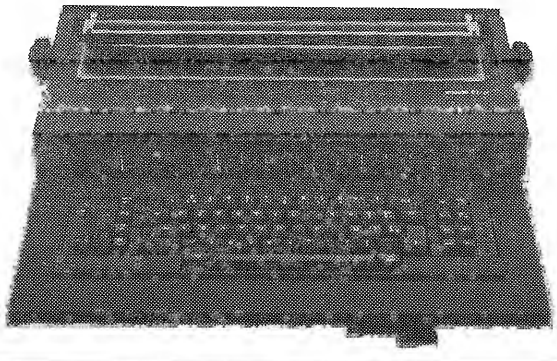
Fitting service is available for $25.00 in most capital cities.

Daisy Wheel Typewriter/Printer

ONLY $2049 INC. S.T.

MICRO-80 has converted the new OLIVETTI ET-121 DAISY WHEEL typewriter to work with the TRS-80 and SYSTEM 80 or any other microcomputer with a Centronics parallel port (RS 232 serial interface available shortly). The ET-121 typewriter is renowned for its high quality, fast speed (17 c.p.s.), quietness and reliability. MICRO-80 is renowned for its knowledge of the TRS-80/SYSTEM 80 and its sensible pricing policy. Together, we have produced a dual-purpose machine:- an attractive, modern, correcting typewriter which doubles as a correspondence quality Daisy-wheel printer when used with your micro-computer.

How good is it? - This part of our advertisement was typeset using an ET-121 driven by a TRS-80. Write and ask for full details.



*** NEW IMPORTED SOFTWARE ***

FOR TRS-80 MODELS I & III FROM THE CORNSOFT GROUP

SCARFMAN an AMAZEing game known in the arcades as Ghostmuncher or Pacman. This is by far the best implementation of this thrilling arcade game that we have seen on the TRS-80. It comes complete with realistic sounds, fast action and nine levels of play. SCARFMAN will support the use of Alpha Products Joysticks.

MODEL I & III TAPE $16-95 + 60¢ p&p

MODEL I DISK $22-95 + 60¢ p&p

MODEL III DISK $22-95 + 60¢ p&p

ENHBAS $59-95 + $1-00 p&p
MODEL I DISK OR CASSETTE, MODEL III DISK OR CASSETTE (Specify)

Short for ENHANCED BASIC, ENHBAS adds over 30 new commands and functions to your BASIC interpreter.

SORTING COMMANDS

Sorts 1000 strings in less than 10 seconds! - without Microsoft's garbage collection delays. Call up to 14 keys and tags in one sort.

BRANCHING COMMANDS

Label BASIC lines then branch to them via the new GTO or GSUB statements. Makes for modular self-documenting programs. RESTORE to a data statement at any line number or label. POP eliminates the last return from a sub-routine call. WHILE-WEND allows you to produce structured programs.

GRAPHIC/SCREEN CONTROL

SCROLL, LEFT, INVERT, DRAW and PLOT. SCROLL, keeps the number of lines commanded from being rolled off the top. LEFT, moves the whole screen over one character to the left. INVERT, why not RESET all of those SET points, and SET all the RESET points in one command, and while it works, non-graphic blocks are uneffected. DRAW and PLOT makes games and graphs easier to create. DRAW uses a "shape table" which tells the command which direction, how far and how to draw (SET or RESET). DRAW allows the use of SCALE (how big) and ROT (rotate the picture in 45° increments) to help animate those pictures. PLOT makes line and box drawing a one line command (no loops with SETs and RESETs).

OTHER COMMANDS

Single step through BASIC programs with ZSTEP! SOUND gives you a key click, PLAY allows you to control the pitch and length of tones generated by your computer through the cassette port. EXEC enables you to EXECute a string. EVAL evaluates a variable, directly. WPEEK and WPOKE are 16 bit equivalents to PEEK and POKE. WINKEY$ does an INKEY$ but sits put until any key is pressed. A series of other commands give you control over line length and page length of your printer while CALL enables you to call machine language routines from your BASIC program.

HARD DISK - OVER 5 Megabyte STORAGE FOR YOUR MODEL III !!

ONLY $2995*

Now, for the first time in Australia, MICRO-80 is able to offer the ACT Micro-Winchester hard disk storage sub-system for the TRS-80 Model III microcomputer. The ACT is a completely self-contained unit in a small attractive cabinet. It includes a 5Mbyte 5¼ inch Winchester technology, hard disk drive, an ACT controller card with HOP high integrity data separator, power supply, a Model III interface card and cable and CP/M 2.2 (org 4200 or org Ø) disk operating system. In short, it is a complete, stand-alone unit which simply plugs on to the 50 way expansion bus on your Model III. There are absolutely no modifications made to your computer and the Tandy warranty is not effected in any way. The minimum system requirements are a 48K single disk drive TRS-80 Model III microcomputer. ACT offers the following unique advantages:

- ultra fast disk access time (5 million bits per second burst speed)
- ultra high reliability writing and reading of data
- enormous storage capacity (equivalent to almost 28 standard floppy disk drives)
- access to the very wide range of high quality CP/M applications software (standard Model III requires org 4200 Hex programs)
- quiet, reliable operation
- local service and design backup. ACT started in the U.S.A. but is now an Australian owned company based in Sydney.

Coming soon, DOSPLUS 4.0 for your ACT Micro-Winchester.

Now your TRS-80 Model III can be a serious business computer at a fraction of the cost of other brands with similar specifications.

Want an ACT Micro-Winchester on your disk-based Model I or System 80? It could be done but we need to gauge the interest. Write to us to let us know that you would be seriously interested.

* Price is F.O.B. Adelaide. Add $15 road freight anywhere in Australia.

THIS MONTH'S SPECIALS

ET121 TYPEWRITER/PRINTERS ONLY $1500*

Electronics are great, prices keep coming down, not going up. The regular price for our ET121 Electronic Daisywheel typewriter/printer is down to $1750. But we are overstocked so for a short time we are reducing the price to only $1500. This is for the standard ET121 with the MICRO-80 parallel interface. The ET121 is a heavy duty, full-sized (15" carriage) electronic typewriter. With an interface it operates as a correspondence quality printer driven by your computer. If you have been contemplating purchasing one of these machines, now is the time to act, you will not find better value for money anywhere.

* Price is F.O.B. Adelaide, add $20 road freight anywhere in Australia. Cable from TRS-80/SYSTEM 80 printer port to printer $39-00. The typewriter/printer requires the use of an expansion interface, Syspand 80 (on the System 80) or Tandy printer cable.

MICROPOLIS 77 TRACK DISK DRIVE ONLY $499*

One only left in stock. Normally sells at $649-00, this a brand new 77 track MICROPOLIS disk drive complete with cabinet and power supply. We are rationalizing our product lines and will no longer stock these units. (Full service and spares will continue to be available).

* Price is F.O.B. Adelaide, add $10 road freight anywhere in Australia.

DOSPLUS - THE NO-FUSS POWERFUL DISK OPERATING SYSTEM FOR MODEL I OR III

Until DOSPLUS came along you had only two choices. Use TRSDOS which was slow, full of bugs but very widely used, or use NEWDOS 80 which was powerful, fast, had a few bugs, but these were corrected periodically by user-installed zaps but was intended as an experienced programmers DOS and took a lot of study and understanding. If you wanted to take advantage of advancing technology in disk drives, then you had no choice - NEWDOS 80 was the only serious DOS to support dual-head or 80 track disk drives. Make no mistake, NEWDOS 80 is a great DOS but it does take quite a bit of driving and in the Model III in particular, is almost incompatible with TRSDOS.

Then came DOSPLUS 3.3. MICRO-SYSTEMS SOFTWARE, the authors, offered a $100 reward for each genuine bug reported in DOSPLUS 3.3. Over a period of 12 months, they paid out only 5 times! DOSPLUS 3.3 is still current and is an excellent Operating System for those who want a straight-forward, fuss-free DOS using single head disk drives of any track count. There is a high degree of compatibility with TRSDOS. 80 MICROCOMPUTING reports that DOSPLUS 3.3 Double Density is the only serious Double Density Operating System for the Model I.

Now we also have DOSPLUS 3.4. DOSPLUS 3.4 supports dual head disk drives of any track count or stepping speed. It also supports 8" disk drives (with suitable hardware). The following are just a few of the many features available:

- BASIC array sort - multi key, multi array
- Input @ (controlled screen input)
- BASIC checks for active "DO"
- Much improved Backup (more reliable)
- Repeat last DOS command with "/" ENTER
- Short directory of Model 3 TRSDOS disks
- COMPLETE device routing supported (DOS and BASIC)
- Includes the new DOSPLUS Z80 disk BASIC version 1.6
- RESTORE dead files
- CLEARFILE (destroys data by writing zeros to file)
- SPOOLER (allows printing of text while freeing up the CPU)
- Tape/Disk - Disk/Tape utility (with relocator)
- Random access and ASCII modification on Diskdump
- Backup and Format from a "DO" file
- I/O package much faster (disk access time reduced)
- Short directory (file name and extension) available
- Single file convert from Model 3 TRSDOS
- Ability to save BASIC programs directly to another machines' memory (if equipped with DOSPLUS 3.4)
- Single drive copy utility
- PURGE (unwanted files)
- TRANSFER (moves all user files from one disk to another)
- CRUNCH (BASIC program compressor)

And all this in a simple, easy-to-use package supported by a 200 plus page User's Guide. We have ALL versions of DOSPLUS in stock now! Specify the version you require and whether you need it on a 35, 40 or 80 track disk.

DOSPLUS 3.3 $99-95 incl. p&p

Specify: - MODEL 1 - SINGLE DENSITY
- MODEL 1 - DOUBLE DENSITY
- MODEL 3

DOSPLUS 3.4 $149-95 incl. p&p

Specify: - MODEL 1 - SINGLE DENSITY
- MODEL 1 - DOUBLE DENSITY
- MODEL 3

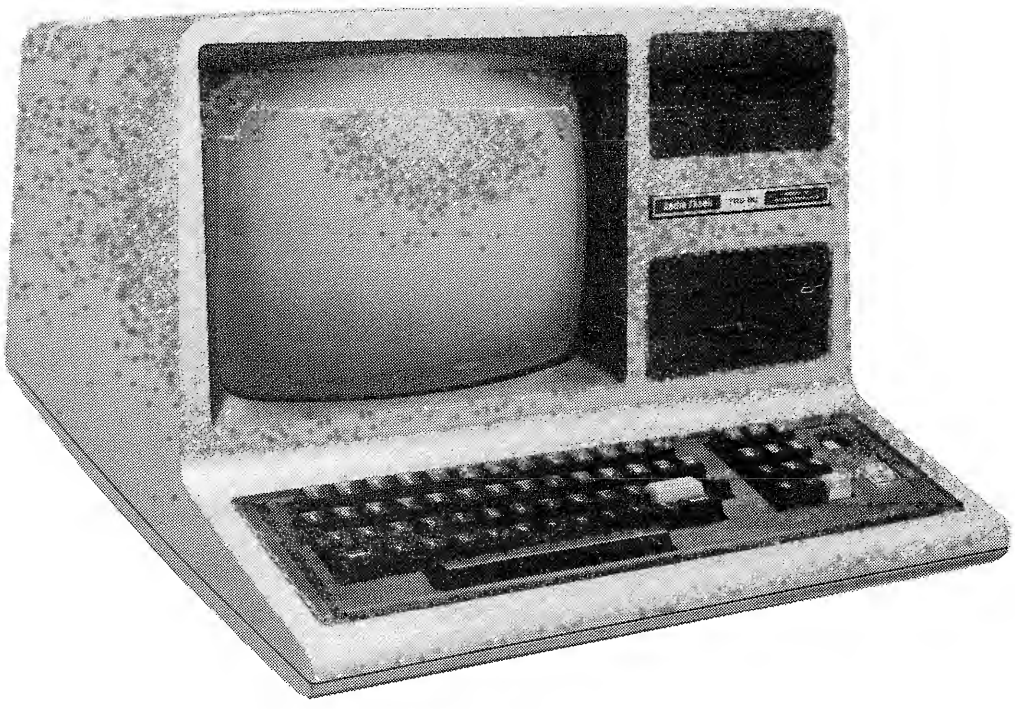
for $3800 incl. Sales Tax



MICRO-80's

MODEL 380 +

MICRO-80 has equipped the TRS-80 with two high reliability dual-head 80 track mini-floppy disk drives made by MPI, one of America's leading mini-disk drive manufacturers.

This turns the mild-mannered Model 3 into a powerhouse able to handle the most difficult business programs. The TRS-80 is one of the best-supported microcomputers in the world. MICRO-80 has been supporting the TRS-80 in Australia for 18 months and is one of Australia's leading dealers in MPI disk drives.

2.8 MEGABYTES FOR $5300 incl. Sales Tax

If you need even more file space you can add MICRO-80's external dual-drive cabinet enclosing two more dual-head 80 track drives for an additional $1500.

EXATRON STRINGY FLOPPY — $372.50 Incl. P&P

All Exatron Stringy Floppies sold by MICRO-80 include the special chained version of **HOUSEHOLD ACCOUNTS,** developed by Charlie Bartlett. When used on the ESF, this program is powerful enough to perform many of the accounting functions in a small business. Remember, the ESF comes complete with a comprehensive manual, a 2 way bus-extender cable, its own power supply and 10 wafers of mixed length. One wafer contains the Data Input/Output program and another the **HOUSEHOLD ACCOUNTS** program.

CAN'T MAKE UP YOUR MIND ABOUT THE ESF?

Then send in $5.00 for a copy of the manual. We will refund your $5.00 IN FULL when you purchase an ESF.

All prices subject to change without notice. Prices are F.O.B. Adelaide. All computers and systems carry MICRO-80's 90-day Warranty covering parts and labour.

SOFTWARE BY AUSTRALIAN AUTHORS

NEW SOFTWARE FROM MICRO-80 PRODUCTS

BUSINESS PROGRAMS

MICROMANAGEMENT STOCK RECORDING SYSTEM (L2/16K)

Cassette version. . . . . $29.95 + $1.00 p&p
Stringy Floppy version. . . . . $33.95 + $1.00 p&p

This system has been in use for 9 months in a number of small retail businesses in Adelaide. It is therefore thoroughly debugged and has been tailor made to suit the requirements of a small business. MICROMANAGEMENT SRC enables you to monitor the current stock level and reorder levels of 500 different stock items per tape or wafer. It includes the following features:—

- Add new items to inventory
- Delete discontinued items from inventory
- List complete file
- Search for any stock number
- Save data to cassette or wafer
- Load data from cassette or wafer
- Adjusts stock levels from sales results and receipt of goods
- List all items requiring reordering

We can thoroughly recommend this program for the small business with a L2/16K computer.

SCOTCH BRAND COMPUTING CASSETTES

Super-quality personal computing cassettes.
C-10 pack of 10 ... ... $26.00 incl. p&p
C-30 pack of 10 ... ... $28.00 incl. p&p

UTILITIES

S-KEY by Edwin Paay $15.95 plus 50c. p&p

S-KEY is a complete keyboard driver routine for the TRS-80 and becomes part of the Level II basic interpreter. With S-KEY loaded the user will have many new features not available with the standard machine.

S-KEY features:

* S-KEY provides an auto-repeat for all the keys on the keyboard. If any key is held down longer than about half a second, the key will repeat until it is released.
* Graphic symbols can be typed direct from the keyboard, this includes all 64 graphic symbols available from the TRS-80/SYSTEM 80.
* S-KEY allows text, BASIC commands and/or graphics to be defined to shifted keys. This makes programming much easier as whole commands and statements can be recalled by typing shift and a letter key.
* Because S-KEY allows graphics to be typed directly from the keyboard, animation and fast graphics are easily implemented by typing the appropriate graphics symbols directly into PRINT statements.
* S-KEY allows the user to LIST a program with PRINT statements containing graphics, properly. S-KEY does this by intercepting the LIST routine when necessary.
* S-KEY allows the user to list an updated list of the shift key entries to the video display or line printer.
* S-KEY can be disabled and enabled when required. This allows other routines which take control of the keyboard to run with S-KEY as well.

Each cassette has TRS-80, DISK and SYSTEM 80 versions and comes with comprehensive documentation.

BMON by Edwin Paay $19.95 plus 50c. p&p
THE ULTIMATE HIGH MEMORY BASIC MONITOR L2/16-48K

Our own personnel refuse to write BASIC without first loading this amazing machine language utility program into high memory! BMON Renumbers; Displays BASIC programs on the screen while they are still loading; tells you the memory locations of the program just loaded; lets you stop a load part-way through; merges two programs, with automatic renumbering of the second so as to prevent any clashes of line numbers; recovers your program even though you did type NEW: makes one program invisible while you work on a second (saves hours of cassette time!); lists all the variables used in the program; makes SYSTEM tapes; lets you Edit memory directly . . . the list goes on and on. Cassette comes with 16K, 32K and 48K versions, ready to load. Can anyone afford NOT to have BMON?

EDUCATIONAL

RPN CALCULATOR (L2/16K & 32K)
$14.95 $ 50c. p&p

Give your computer the power of a $650 reverse polish notation calculator with 45 functions and selectable accuracy of 8 or 16 digits. The main stack and registers are continuously displayed whilst the menu is always instantly accessible without disturbing any calculations or register values. The cassette comes with both the 16K and 32K versions, the latter giving you the additional power of a programmable calculator. Comes with a very comprehensive 15 page manual, which includes instructions to load and modify the 32K programmable version to run in 16K. Whether for business or pleasure, this package will prove invaluable, and turn you '80 into a very powerful instrument.

GAMES

MICROPOLY (L2/16K) $8.95 + 60c p&p

Now you can play Monopoly on your micro. The old favourite board game has moved into the electronic era. This computer version displays the board on the screen, obeys all the rules and, best of all, the banker does not make mistakes with your change!

CONCENTRATION (L2/16K) $8.95 + 60c p&p

Another application of supergraphics. There are 28 "cards" displayed on the screen, face down. Players take it in turn to turn them over with the object of finding matching pairs. There are 40 different patterns which are chosen at random, so the game is full of endless variety. This is of particular value in helping young children to learn the art of concentrating and, at the same time, to introduce them to the computer.

METEOR AND TORPEDO ALLEY (L2/16K)
$10.95 + 60c p&p

Those who frequent games arcades will recognize these two electronic games. In METEOR you must destroy the enemy space ships before they see you. In its most difficult mode, the odds are a thumping 238 to 1 against you being successful. In torpedo alley you must sink the enemy ships without hitting your own supply ship. Both games include sound effects and are remarkably accurate reproductions of the arcade games.

AUSTRALIAN SOFTWARE (Cont.)

GAMES

SHEEPDOG (L2/16K) **$8.95 + 60c p&p**

Ever wondered how a sheepdog manages to drive all those awkward sheep into a pen? Well, here is your chance to find out just how difficult it is and have a lot of fun at the same time. You control the sheepdog, the computer controls the sheep! As if that isn't enough, look out for the dingoes lurking in the bush!

U BOAT **$8.95 + 60c p&p**

Real time simulation at its best! Comes with working sonar-screen and periscope, a full rack of torpedoes, plenty of targets, working fuel and battery meters, helpful Mothership for high-seas reprovisioning and even has emergency radio for that terrible moment when the depth charges put your crew at risk. Requires Level II/16K.

SPACE INVADERS WITH SOUND **$8.95 + 60c p&p**

Much improved version of this arcade favourite with redesigned laser and cannon blasts, high-speed cannon, 50 roving drone targets, 10 motherships and heaps of fun for all. Level II with 4K and 16K versions on this cassette.

GOLF (L2/16K) **$8.95 + 60c p&p**

Pit your skills of mini-golf against the computer. Choose the level of difficulty, the number of holes and whether you want to play straight mini golf or crazy golf. Complete with hazards, water traps, bunkers and trees. Great fun for kids of all ages.

DOMINOES(L2/16K) **$8.95 + 60c p&p**

Pit your skill at dominoes against the computer, which provides a tireless opponent. Another application of supergraphics from the stable of Charlie Bartlett. Dominoes are shown approximately life size in full detail (except for colour!). The monitor screen is a window which you can move from one end of the string of dominoes to the other. Best of all, you don't lose any pieces between games!

KID'S STUFF (formerly MMM-1) **$8.95 + 60c p&p**

Three games on one cassette from that master of TRS-80 graphics, Charlie Bartlett. Includes INDY 500, an exciting road race that gets faster and faster the longer you play, SUBHUNT in which your warship blows up unfortunate little submarines all over the place, and KNIEVEL (as in motorcycle, ramp and buses).

OTHER PROGRAMS

INFINITE BASIC BY RACET (32K/1 DISK)
$49.95 + 50c. p&p

Full matrix functions — 30 BASIC commands; 50 more STRING functions as BASIC commands.

GSF/L2/48K **$24.95 + 50c. p&p**

18 machine language routines including RACET sorts.

BUSINESS ADDRESS AND INFORMATION SYSTEM (48K/DISK) **$24.95 + 50c. p&p**

Allows you to store addresses and information about businesses, edit them and print them out.

HISPED (L216, 32 or 48K) $29.95

This machine language program allows you to SAVE and LOAD programs and data to tape at speeds up to 2000 band (4 times normal) using a standard cassette recorder. A switch must be installed to remove the XRX III loading board, if fitted.

LOWER CASE FOR YOUR TRS-80/SYSTEM 80
Kit only $49.00 plus $2.00 p&p

Give your TRS-80 or SYSTEM 80 a lower case display with proper descenders and a block cursor (similar to the TRS-80 Model III). Also includes symbols for the four suits of cards. Includes full fitting instructions, all necessary components and a special machine language driver program to enable lower case in BASIC. The modification is similar to the Tandy model and does not work with Electric Pencil without further modifications.

These kits require disassembly of your computer and some soldering. They should only be installed by someone who has experience in soldering integrated circuits, using a low power, properly earthed soldering iron. If you do not have the necessary experience/equipment, we will install the modification for you for $20 plus freight in both directions. Make sure you arrange the installation with us first, before despatching your computer, so that we can assure you of a rapid turn-around. We are also arranging to have installers in each State. See elsewhere in this issue for their names and addresses.

$49.00 plus $2.00 p&p

EPSON MX-80 PRINTER
ONLY *$949 Inc. Cable for TRS-80 and p&p
(*Printer only — $940 incl. p&p)

The EPSON MX-80 printer is compact, quiet, has features unheard of only 2-3 years ago in a printer at any price and, above all, is ultra-reliable. All available print modes may be selected under software control. Features include:

- high quality 9x9 dot-matrix character formation
- 3 character densities
  - . 80 characters per line at 10 chars/inch
  - .132 characters per line at 16.5 chars/inch
  - . 40 characters per line at 5 chars/inch
- 2 line spacings
  - . 6 lines per inch 8 lines per inch
- 80 characters per second print speed
- bi-directional printing
- logical seeking of shortest path for printing
- lower case with descenders
- TRS-80 graphics characters built in
- standard Centronics printer port

The bi-directional printing coupled with the logical seeking of the shortest print path (which means that the print head will commence printing the next line from the end which requires the least travel, thereby minimising unutilised time) gives this printer a much higher throughput rate than many other printers quoting print speeds of 120 c.p.s. or even higher.

GREEN SCREEN SIMULATOR
$9.50 incl. p&p

The GREEN SCREEN SIMULATOR is made from a deep green perspex, cut to fit your monitor. It improves contrast and is much more restful to the eyes than the normal grey and white image.

All editorial staff of MICRO-80 are now using GREEN SCREEN SIMULATORS on their own monitors.

Please make sure to specify whether you have an old (squarish) or new (rounded) style monitor when ordering. Not available for Dick Smith monitors.

***** BASIC + LABELS LII/48K . - by R.T. Worley *****

Those of us who program in BASIC probably believe that it is very tedious to program in machine language, and so it would be, if programmers' aids such as editor/assemblers had not been developed. Such aids are now so advanced that they provide features superior to those available to BASIC programmers. One of the most useful features of an editor/assembler is the ability to attach LABELS to routines and jump to those LABELS from other parts of the program. The concept is somewhat like GOTO in BASIC with one major and significant difference. Whereas with GOTO it is necessary to nominate the BASIC line number to which you wish program flow to pass, this is not the case with an editor/assembler. The LABEL itself uniquely identifies the routine and the Assembler places the corresponding code in the appropriate place in memory and then automatically sets correct Jump addresses throughout the program. This makes for structured programs which do not jump about all over the place and, if meaningful Labels are used, the source code is largely self-documenting.

BASIC + LABELS now offers the BASIC programmer a similar facility - with this 1.8K machine language program loaded in high memory, you may assign Labels to sections of your BASIC program. The ml. program will then "compile" your program into BASIC code which can be RUN by the standard BASIC interpreter. The version produced here is for a 48K machine and resides from F72ØH (63264) to FE42H (65Ø9Ø). If you enter the source code into an Editor/Assembler you may alter the program for different memory sizes by changing line 5Ø. Use BASEPR EQU ØB7ØØH for a 32K machine and BASEPR EQU 77ØØH for a 16K machine. The object code supplied on the monthly cassette is for 16K machines, whilst that on disk is for 48K machines.

BASIC + LABELS now offers the BASIC programmer a similar facility - with this 1.8K machine language program loaded in high memory, you may assign Labels to sections of your BASIC program. The ml.program will then "compile" your program into BASIC code which can be RUN by the standard BASIC interpreter. The hex listing produced here is for a 16K machine and resides from 772ØH to 7F4ØH. Unfortunately, the well commented source code is too long to reproduce in the magazine but is provided on the monthly cassette and disk. The cassette also contains the 16K object code whilst the disk contains the 48K object code. Any reader who requires a hard copy listing of the source code may obtain a photo copy by sending $5-00 to MICRO-80, P.O. BOX 213, GOODWOOD, S.A. 5034. The line number references in the following text refer to the source code. The program may be assembled for different memory sizes by changing line 5Ø. Use BASEPR EQU ØB7ØØH for a 32K machine and BASEPR EQU 77ØØH for a 16K machine.

USING BASIC + LABELS.

There are three main functions available to the user:

- Renumbering
- Deleting REM lines
- Label handling.

1. Renumbering.

The renumber command resequences the entire BASIC program in memory using any specified starting number and any specified step (1-255).

All lines with first character REM (as a token) will be given numbers, either:

(i) a multiple of 10 times the step, or
(ii) such that the next line will be a multiple of 10 times the step.

Either option may be chosen. The second option is so that sections of program will stand out (because of their line numbers) even when REM lines are deleted. Please note that the use of ' in place of REM does not produce a line with first character REM (in fact, it is coded as : followed by REM followed by ' and so wastes memory!)

Line numbers following THEN, ELSE, RESUME, (ON...)GOTO, and (ON...)GOSUB are updated during resequencing.

2. Deleting REM lines.

This deletes all REM lines, i.e. all lines which have first character REM (as a token). The note in paragraph 2 above applies.

3. Label handling.

As well as resequencing as described in section 1, this replaces label in branch statements by the corresponding line number, and moves blocks of program about as specified by labels.

A branch label heading consists of <*label*> where "label" may be any alphanumeric characters. Blanks in labels are ignored. The following illustrates the use of labels in branch statements.

```
100 GOTO <*FRED*>                100 GOTO 260
     :                    ==>         :
250 <*FRED*>                     250 REM*FRED*>
260  :                           260  :
```

Note that the branch is to the line after the heading label, that the heading label has been turned into a REM line that may be deleted, and that comments may follow a heading label (line 250) since the rest of the line is ignored. A label reference (as in line 100) may be used in place of a line number after THEN, ELSE, GOTO, GOSUB, and RESUME. The use of ON var GOTO <*label1*> , <*label2*> etc. is allowed. There is a limit on the number of label headings that can be used. This is 98 and is determined by the size of a table (lines 8085 and 9190).

A program block move requires three labels -

(i) a label heading <*label*> marking the start of the block to be moved;
(ii) an end label <*ENDlabel*> marking the end of the block to be moved; and
(iii) an insertion label <*LOClabel*> marking the point in the program for insertion of the block.

The following example illustrates the use.

```
 90  :                            90  :
100 <*BILL*>                     170  :
110  :                            :
 :                       ==>     250  :
150  :                           110 REM*BILL*>
160 <*ENDBILL*>                  110  :
170  :                            :
 :                               150  :
250  :                           270  :
260 <*LOCBILL*>                   :
270  :
 :
```

Of course, the line numbers will be altered to correct sequence numbers. Note that the lines 160 and 260 are deleted, and that line 100 has been turned into a REM line. Also note that anything following the label in line 100 will be ignored.

Since programs making frequent calls to subroutines work fastest when the subroutine is located as near the beginning of the program as possible (or, in the case of the TRS-80, when they closely follow the point from whence they are called), a special block move instruction is available. If the block header label is of the form <*GOSUBlabel*> and the end of block marker is, correspondingly, <*ENDGOSUBlabel*> then the block is moved to the beginning of the program.

To preserve program flow in case a <*GOSUBlabel*> is used, an initial line is added to the program at the front. The following illustrates the use of <*GOSUBlabel*> . Note in particular how the new line 1 ensures correct program flow.

```
 10 :                          1 GOTO 10
 :                           110 REM*GOSUBFRANK*>
100 :                        120 :
110 <*GOSUBFRANK*>            :
120 :                        170 RETURN
 :                    ==>     10 :
170 RETURN                    :
180 <*ENDGOSUBFRANK*>        100 :
190 :                        190 :
 :                            :
```

OPERATION OF THE PROGRAM.

As indicated by line 936Ø, (which instructs the assembler to produce an autostart for the system tape), the program entry point is BEGINT i.e. line 8Ø8Ø. Thus to call the program from BASIC you must type SYSTEM ENTER and respond to the system prompt by / ENTER . If you wish you can add (before line 936Ø),

```
ORG    41A4H
DEFW   BEGINT
```

and then the command LINE will automatically enter LABELS. However, with a disk system and a good DOS, the statement

```
CMD"LABELS
```

will work. With standard DOS it may be necessary to have loaded LABELS earlier and enter LABELS via DEBUG and the G command (having noted the address of BEGINT when assembling.

Lines 8Ø8Ø-831Ø do some initialisation, display the menu, and branch to the selected routine (renumber, delete REM line, or full label handler).

The renumberer is the first routine, starting at line 48Ø (it is preceded by some initialisation). The renumberer scans the program three times. The first time through it checks out all line number references and warns of all missing lines (too many and they scroll off the screen!) and tests if the proposed numbering will work. The second time through it replaces the old line numbers by the new ones, and replaces the link pointers (the start of a program line consists of a link pointer followed by the line number, when the line has been put into memory). The third time through the line numbers after GOTO etc. are updated by evaluating the old number, scanning the link pointers (which have been replaced by the old numbers) till the right line has been found, getting the new number of the line, and replacing the old number after the GOTO by the new number. This is slow, but saves building a table (and besides, machine language is so fast anyway that I don't worry about the difference between 1 and 20 seconds). Finally, the ROM routine that resets the link pointers is called and the program returns to the menu.

In the first and third scans of the BASIC program the same branching routine 67Ø-89Ø is used, the jump addresses being altered as necessary for each pass. The branching routine is entered with a character from the BASIC program. The character is tested, and unless it needs special handling the branching routine is re-entered with the next character of the BASIC program.

The label handler first calls the renumberer with step 1 and first line number 2 (leaving room to insert the line 1 GOTO 2). On return to STRST2 ("structure, stage 2") some jump addresses in the branching routine are changed and the program scanned for reference labels after GOTO etc. These are replaced by the correct numbers and the line number in saved in a table for later "REM"ing. On return to STRST3 a similar scan is started to handle <*LOClabel*> instructions. This returns to STRST4 which handles the <*GOSUBlabel*> instructions. STRST5 deletes REMREM lines (which are the remains of the <*LOC and <*GOSUB lines). STRST6 inserts the line 1 GOTO 2, STRST7 calls the ROM link pointer resetting routine and STRST7 calls the renumberer with the wanted step and start.

Note that there is quite a number of ROM calls. Since ROMs vary slightly, there may be trouble with using them in other machines. However, I believe the calls used work in most (and probably work in all) TRS-80 MODEL I ROMs. If any trouble occurs, I will give MICRO-80 the relevant code.

***** POLYNOMIAL REGRESSION ANALYSIS L2/16K - by J.R. Jones *****

Polynomial Regression analysis is used to test data for a non-linear or curvilinear relationship between the dependent variable (Y) and the independent variable (X), according to the model $Y=A+BX+CX^2+DX^3+....ETC$. This routine allows polynomial regression analysis to the models :

$$Y = A + BX$$
$$Y = A + BX + CX^2$$
$$Y = A + BX + CX^2 + DX^3$$

on up to 100 data pairs, which are verified and can be edited following entry. The routine calculates coefficients for selected polynomial models, the mean values of X and Y and R^2 (an indication of closeness of fit, where 1 is perfect). The routine will also print residual tables on command and compute values of Y for entered values of X.

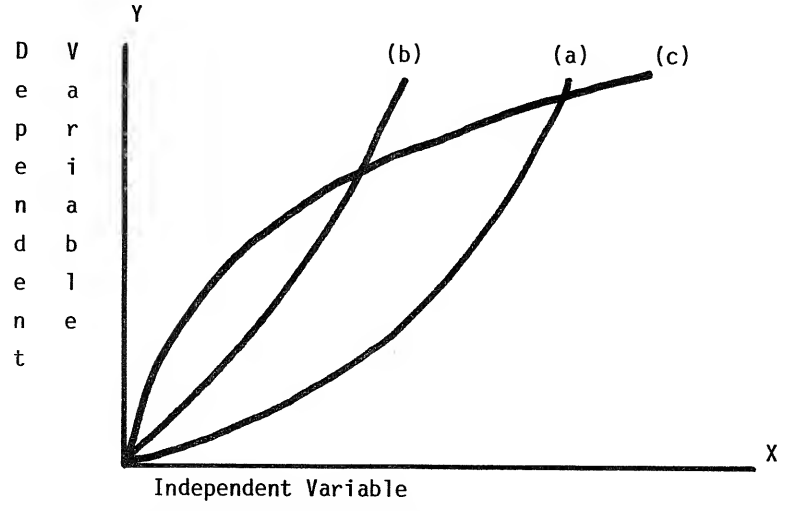
CURVILINEAR REGRESSION ANALYSIS

Curvilinear Regression analysis is used to test data for non-linear or curvilinear relationship between the dependent variable (Y), and the independent variable (X). This routine allows regression analysis for the curvilinear models :

$$Y = A * E\uparrow(BX)$$
$$Y = A + B\ LN(X)$$
$$Y = A * X(\uparrow B)$$

using up to 100 data pairs, which are verified and can be edited following entry. The routine calculates coefficients for selected curvilinear models, the mean values of X and Y, and R^2 (an indication of closesness of fit, where 1 is perfect). The routine also prints residual tables on command and computes values of Y for entered values of X.

Curvilinear Regression.



The Mathematical models for these lines are:

(a) Exponential : $Y = A*C\uparrow(BX)$

(b) Power : $Y = A*XB$

(c) Logarithmic : $Y = A+B(X)$

where A and B are specific equation coefficients for calculated relationships.

***** STEEPLE CHASE LII/16K - by C. Cranstone *****

Welcome to steeple chase! The grand old DUKE OF NAGSVILLE has invited you and your associates to a steeple chase in his honour.

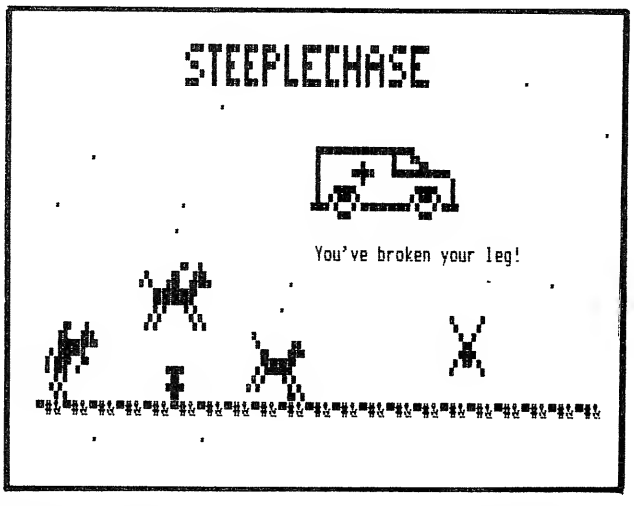
Due to an old war wound the Duke cannot participate. The Duke will be watching and making various comments on your expertise. (Or lack of!!!)

If you ride very badly then you risk the chance of a broken leg. (Or two!!) If you do manage to break a leg you will be taken away in the ambulance.

Press the 'S' key to start the ride.
Press the 'J' key to jump.

The winner and scores will be displayed at the end of the day.

The program also includes sound which can be heard through the external cassette deck. The sound routine is POKEd into line 1Ø after the REM. If you are typing this program in from the magazine, you should fill the rest of line 1Ø with blanks, otherwise an error will result.



```

***** NEXT MONTH'S ISSUE *****

Next month's issue will contain at least the following programs plus the usual features and articles.

** MEASUREMENTS LII/16K **

This program was primarily designed to help high school students with their studies. It poses problems and asks questions on the following solid figures: cube, rectangle faced prism, rhombus faced prism, triangle faced prism, parallelogram faced prism, trapesium faced prism, cylinder, pyramid cone and sphere. All of the above figures are displayed graphically before the questions are asked.

** FILES LII/48K **

Yes...it is! The files program that was requested to be modified to run in 48K. Originally published way back in issue 3, February 1980, the program had a m/l routine that had to be loaded separately - very messy!!! This version has the machine language built right into the BASIC program.

** DUPLEX LII/4K m/l **

This is a package of double precision mathematical functions including, SIN, COS, TAN, ATN, EXP, LOG and SQR. All of these functions are called quite easily from BASIC, e.g. X = USR SIN(Y)

** SUPER HANGMAN LII/16K **

Oh no! Not that again. That's what you thought when you saw the title and so did I, which just goes to prove how wrong Software Editors could be if they didn't look at EVERY program, regardless of the title. This FANTASTIC program has constantly animated graphics, plays tunes and sound effects and is Hangman like you never saw it before - don't miss it!!!

** DATA BASE MANAGEMENT SYSTEM 48K/Disk **

Next month we present this efficient Data base management system. This one program alone is worth more than your subscription AND the author has found a way to store strings so that BASIC doesn't waste time shuffling them around. Next month he reveals all.....

APPLICATION FOR PUBLICATION OF A PROGRAM IN MICRO-80

Date .....

To **MICRO-80**

Please consider the enclosed program for ...

Tick where appropriate

(i) Publication in MICRO-80 .....

(ii) Publication on disk or cassette only .....

(iii) Both .....

Name .....

Address .....

.....

.....Postcode .....

***** CHECK LIST *****

Please ensure that the cassette or disk is clearly marked with your name and address, program name(s), Memory size, Level I, II, System 1 or 2, Edtasm, System, etc. The use of REM statements with your name and address is suggested, in case the program becomes separated from the accompanying literature.

Ensure that you supply adequate instructions, notes on what the program does and how it does it, etc.

For system tapes, the start, end, and entry points, etc.

The changes or improvements that you think may improve it.

Please package securely — padabags are suggested — and enclose stamps or postage if you want your cassette or disk returned.

***** CASSETTE/DISK EDITION INDEX *****

The cassette edition of MICRO-80 contains all the software listed each month, on cassette. All cassette subscribers need do is CLOAD and RUN the programs. Level II programs are recorded on side 1 of the cassette. Level I programs are recorded on side 2. Level I programs are not compatible with the System 80. All programs are recorded twice in succession. Note, System 80 computers have had different tape-counters fitted at different times. The approximate start positions shown are correct for the very early System 80 without the volume control or level meter. They are probably incorrect for later machines. The rates for a cassette subscription are printed on the inside front cover of each issue of the magazine.

The disk edition contains all those programs which can be executed from disk, including Level I programs. Level I disk programs are saved in the NEWDOS format. Users require the Level I/CMD utility supplied with NEWDOS + or NEWDOS 80 version 1.0 to run them.
